

GRANDEUR PHYSIO SADDLE PADS

MATERIALS

Quilted fabric on top side:

Grandeur saddle pads are made from carefully selected, high-quality materials.

The outer material is a durable, dirt-repellent and air-permeable cotton blend (colours: white, black, brown) or microfiber (all other colours) that does not fade when washed and shrinks only slightly or not at all.

Cotton on the underside:

Grandeur saddle pads are made from a cotton blended fibre underside. The colour is a light "sand tone".

Fur under the saddle panels:

For additional protection, the Physio pads come with a high-quality hollow fibre floor on the underside (saddle layer). The pile absorbs movement and forms a breathable layer. It has a heat-regulating and pressure-balancing effect.

CARE INSTRUCTIONS

Grandeur saddle pads and the materials used are generally machine washable. A normal saddle pad can be placed in a sufficiently large washing machine. Remove all inserts and fold the saddle pad inside out so that the undersides face outwards or the pads (foam rubber or adhesive grid) lie directly on top of each other.

The foam rubber or adhesive grid pads should not be allowed to get stuck on the rubber seals of the washing machine, as this can cause the saddle pad to tear. It is important to pay attention to this!

For safety and protection, it is advisable to put the saddle pad in a pillowcase or something similar before washing. Wash on a gentle program with a mild detergent, maximum at 40° and do not spin!

Damage caused by washing is not covered by the warranty.
